

Postdoctoral Research Scientist position, Lamont-Doherty Earth Observatory of Columbia University

The Lamont-Doherty Earth Observatory of Columbia University invites applications for a Postdoctoral Research Scientist for an NSF-funded project to investigate the preservation of Plio-Pleistocene benthic foraminifera shells from various depositional settings.

This position will be based at the Lamont campus in Rockland County, NY, near New York City, and will include multiple trips to the EPMA and SIMS facilities at UW-Madison.

Candidates should have a PhD in geochemistry or related fields. A strong foundation in paleoceanography and foraminifera-based proxies, in particular delta18O and Mg/Ca, is preferred. Knowledge of *in situ* analytical approaches such as EPMA and LA-ICPMS as well as SEM operation is highly desired.

Appointment will be for 1 year, with continuation pending funding and progress.

Search will remain open for at least 30 days after the ad appears and will continue until the position is filled.
