

## **Two Tenure-track Assistant Professor Positions – University of Washington**

The University of Washington School of Oceanography seeks applications for two full-time, 9-month faculty positions at the level of tenure-track Assistant Professor in the broad fields of Marine Geological Processes and Biological Oceanography. The anticipated start date of the positions is September 16, 2024. Review for both the Marine Geological Processes position and the Biological Oceanography position will begin on **December 1, 2023**. Applications will be considered until the positions are filled.

### **Position 1 – Marine Geological Processes**

This position will specialize in the study of geological processes in the ocean. The successful candidate will be expected to expand the School of Oceanography's research and teaching efforts in marine geology and geophysics, contributing to an improved understanding of tectonic, sedimentary, and/or geochemical cycles. Subspecialty expertise could fall within a wide range of areas, including but not limited to earthquake seismology, geophysical imaging, geochemistry, geohazards, geomorphology, hydrogeology, hydrothermal and seep processes, seafloor geodesy, and sedimentology/stratigraphy. We welcome the full range of approaches, from field observations and data analysis to laboratory or numerical simulations and theoretical modeling.

### **Position 2 – Biological Oceanography**

This position will specialize in the study of the ecological or biogeochemical roles of organisms and communities in the dark ocean. The successful candidate will be expected to expand the School's research and teaching efforts in biological oceanography, contributing to an improved understanding of microbes, zooplankton or invertebrates in pelagic, sediment, hydrothermal, seep, or seafloor environments. Subspecialty expertise could fall within a range of areas, including evolution, ecology, physiology, or biogeochemistry of organisms and communities. We welcome a full range of approaches, including field observations, laboratory studies, and modeling.

### **Qualifications**

Applicants should have a Ph.D. degree, or foreign equivalent, in Oceanography or a related field by the start date of the appointment.

The University of Washington School of Oceanography is highly multidisciplinary and promotes a collegial culture with broad interdisciplinary research ties throughout the School and across the UW campus. UW faculty are expected to engage in research, teaching, and service. The successful candidates for these positions will develop new or expanded areas of expertise within the School of Oceanography and collaborate with colleagues within the School and across the University. The candidates will be expected to contribute to the teaching mission of the School, including teaching across different topics, at the graduate and undergraduate levels. In all aspects of the positions, the candidates will be expected to promote a diverse, inclusive, and equitable environment for students, faculty, staff, and the public.
